

Robot System Products

Product catalog

ROBOT SYSTEM PRODUCTS HAS A WIDE RANGE OF ROBOT PERIPHERAL PRODUCTS:
Tool changers | Swivels | Swivels with tool changer | Grippers | Hose packages | Valve units | Tool systems

The company

Robot System Products is a front-rank provider of peripheral products for high performance robot applications. We provide complete tool system solutions for your robot installations, aiming to improve your productivity with the most reliable and cost-effective tooling on the market. Continuously we explore emerging technologies, working with leading edge design.

Local presence worldwide

As a global company, Robot System Products has subsidiaries and distribution partners in more than 20 countries. Our headquarters is located in Västerås, Sweden.

Products

Our products are available for all major robot brands and come with complete documentation.

We offer:

- Tool changers
- Swivels
- Swivels with tool changer
- Grippers
- Hose packages
- Valve units
- Tool systems
- Tool stands

Tool changers and tool attachments

Tool changers

Robot System Products tool changers are designed to maximize the flexibility and reliability of your robot fleet. Robustness and high safety are combined with low weight and compactness. Depending on model and options, electrical signals, weld and servo power, data, water and compressed air are transferred from the robot side to the tool.

The patented locking device TrueConnect™ has a minimum of play and gives a practically, through the lifespan, absolute positioning repeatability. The principle behind the locking mechanism is the uniform distribution of load, obtained by pressing locking balls into spherical grooves. In consequence, substantially larger positional tolerances are accepted during docking.

RSP Tool changers are designed to make it possible for you to perform tool changing operations continuously day out and day in.

- Robust design for high torque applications
- Fast docking with high tolerance
- Absolute positioning repeatability
- 3D-models for Robot CAD-systems
- Low maintenance and high uptime

Swivels with tool changer and attachments

Swivels with tool changer

Robot System Products swivels with tool changers unite the best out of two technologies. With the TrueConnect™ tool changing mechanism integrated with our swivel technology, absolute positioning repeatability and large tolerances at docking is combined with full motional freedom of your robots – axis 6 is allowed to rotate freely without being limited by hoses, cables or other obstacles. Low weight, high corrosion resistance and a minimum of service requirements will maximize uptime and consequently enhance your productivity in all applications involving substantial robot motions.

- Fast docking with high tolerance
- Absolute positioning repeatability
- Free rotation axis 6
- No limits to axis 4 and 5 when used with RSP hose packages
- Low weight and high corrosion resistance
- Low maintenance and high uptime

Note!

RSP's design of swivel units is based on the ISO standard for robot flanges. For the swivel unit to be able to function properly an adaptation kit has to be included. RSP provides a wide range of adaptation kits for different robot brands. If you do not find your robot model please contact RSP support.

Swivels

Swivels

With Robot System Products swivels you can provide compressed air, water, electrical and data signals, as well as weld and servo power to your tools with robot motion capabilities maintained. Axis 6 is allowed to rotate freely without limitations by hoses, cables or other obstacles and together with our hose packages there are no limits to axis 4 and 5 as well.

With RSP swivels, the low weight, high corrosion resistance and a minimum of service requirements will enhance your productivity and maximize uptime in all applications involving substantial robot motions.

- Free rotation axis 6
- No limits to axis 4 and 5 when used with RSP hose packages
- Air, water, electrical and fieldbus signals
- Weld and servo power
- Low weight and high corrosion resistance
- Low maintenance and high uptime

With swivel

The rotation of axis 6 does not affect the Dress Pack on the upper arm.

Without swivel

Hose and cable package will be twisted around the upper arm of the robot when axis 6 rotates.

Note!

RSP's design of swivel units is based on the ISO standard for robot flanges. For the swivel unit to be able to function properly an adaptation kit has to be included. RSP provides a wide range of adaptation kits for different robot brands. If you do not find your robot model please contact RSP support.

Adaptation kit for S350	For information about necessary adaptation kits see chapter: "Adaptation kits for swivels and swivels with tool changer"	

Adaptations

Adaptation kits

Robot System Products tool changers, swivels and swivels with integrated tool changers are based on the ISO standard for robot flange bolt patterns. For other bolt circles, adaptation plates are available from RSP. For swivel units and swivels with integrated tool changer, specific adaptation kits have to be used to ensure rotation functionality.

NOTE!

There is always a risk when a large robot is equipped with a small tool changer due to the fact that the larger robot uses higher forces in acceleration, deceleration and most importantly when the robot perform an emergency stop. The maximum dynamic forces are rated for each product and you can always consult a RSP representative or our website if you have any questions on how to select the right product for your robot.

Adaptation kits for tool changers

All screws are included.

Hose packages

Hose packages

The design of Robot System Products hose packages is based on years of experience and proven technology. The installation of extra cabling is simplified for all material handling applications. Together with our swivels the robot can move freely, and your cabling will have a longer lifetime.

- Free robot movements together with swivel
- Quick and easy installation
- Longer cabling life
- Modular design

Our hose packages include all necessary bolts and brackets for your robot.

Hose packages for swivel solutions – upper arm

	Part number	Description	Robot model	Hose		
				length (m)	DI (mm)	DO (mm)
	P0030	Hose package ABB IRB 140	ABB IRB 140	0.9	22	28

Valve units

Valve units

In Robot System Products valve units, the air and electrical connections are integrated into one single compact unit made for mounting at practically any type of robot. As the tool changing function, integrated in the unit, controls the air supply to other valves the programming of the robot is simplified. Some available options are interfaces for sensors, data and a vacuum module.

- One compact unit for air and electrical signals
- Integrated tool changing function
- Standard (ISO) valve interface
- Fieldbus compatible
- Vacuum module available

The valve unit can handle up to five standard ISO valves where one of the valves can be configured as a tool changing valve.

Small valve units

P0010A

Small valve unit without valves

P0012A

Small valve unit with one Festo valve

P0013A

Small valve unit with three Festo valves

P0011A

Small valve unit with three Festo valves with tool changer function

Small valve units

Article number	P0010A	P0012A	P0013A	P0011A
Weight (kg)	0.8	1.0	1.1	1.1
Working temperature	+10°C – +60°C			
	Air ducts			
Tool change valve 5/2 monostable	–	–	–	1
Directional valves 5/2 monostable	–	1	3	2
Valve size	ISO02 18mm IE (ISO15407-2)			
Number of outlet air ducts	Max 8	2	6	
Number of inlet air ducts	Max 2	1	1	
Max air pressure	1.0 MPa			
Air flow m³/min, free at Pin = 1.0MPa	–	550 l/min for each valve		550 l/min totally
Connection, inlet	8 mm hose			
Connection, outlet	6 mm hose			
Air quality	Oil-clean and waterless filtered air, with max 25µm particle content			
	Electrical signals			
Number of signals, robot side	Max 16 (6 more signals when using option P0017A)			
Dedicated signals, robot side	1 x 24V DC			
	1 x 0V DC			
	8 Valve control			
Number of signals, tool side	8			
Dedicated signals, tool side	1 x 24V DC			
	1 x 0V DC			
Max current	2A			
Voltage, valves	+24V			
Max voltage, other signals	+60V			
Connection, robot side	1 M16 x 1.5 holes for cable gland, 1 M20 x 1.5 hole for cable gland			
Connection, tool side	Female M12-8 pole contact

Grippers

Gripper Frame

- Light weight
- Universal hole pattern
- Built in cable guidance
- Rigid design

2-jaw parallel gripper

- Tried and tested T-groove for gripping at max. loads
- Fast and efficient gripping
- Sealed air connection to prevent contamination

3-jaw centric gripper

- Centric gripping of round and angular workpieces
- Universal application due to different types of jaws
- Gripping pressure controlled by change of pressure

Long stroke gripper

- Suitable for long top jaws
- Optional, separate delivery of a gripping force safety device for exterior tension (GA) and interior tension (GI) of gripper
- Tubeless direct connection for central lubrication and sealing air

See our separate catalog for Grippers!

How to order from RSP

There are a few steps you should consider before placing an order:

- The size of the payload and robot when selecting the product
- The robot model name and arm length, model year if available.

Send your order by email to order@rsp.eu.com with the following information:

1. Part number, description, price and amount
2. PO number, date, required delivery date and delivery address
3. If available, also state the quotation number

If you are a new customer, we also need below information:

1. Contact person, phone number and email address
2. Company name, address, invoice address, phone/fax number and email address
3. Organization and tax number (VAT inside Europe)

RSP is based in Västerås Sweden and has offices and agents in over 20 countries worldwide.
